

Highlights

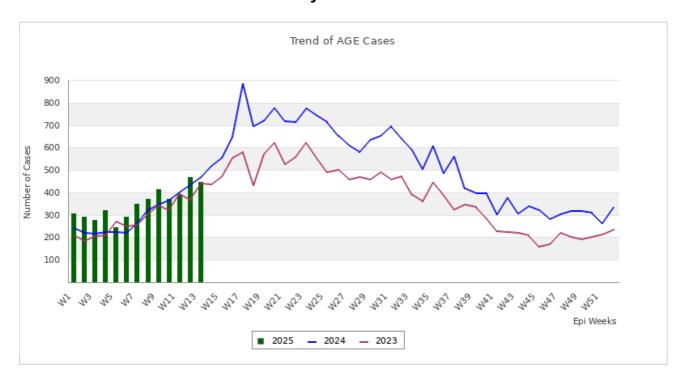

Among the reported diseases, **SARI** is the leading cause of morbidity in Week 13 with **712 reported cases**.

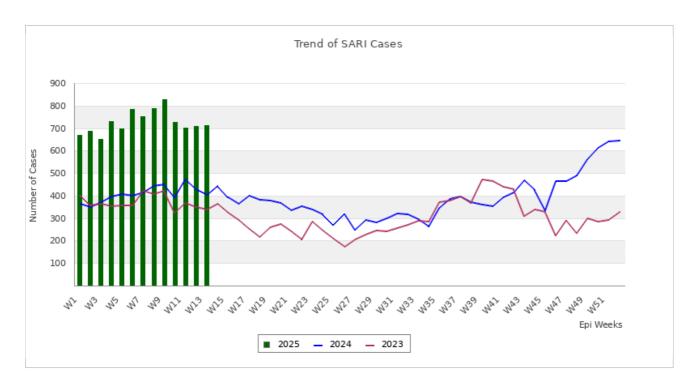

Overall reporting rate of Week 13 is **98.5%** with **132 out of 134** sentinel sites reporting to EWARS.

This bulletin includes data since January 2022 till date, including comparison of the same period last two year. In May 2019, 36 new sentinel sites (including public hospitals, private hospitals, and medical colleges) were added and was gradually oriented and started reporting. Recently, in November 2024, 17 reporting sites selected from all the provices of Nepal were upgraded to sentinel sites, thus the number of sentinel sites are increasing. The current number of sentinel sites is 134.

Trend of Outbreak Prone Diseases/Syndromes

Comparative Analysis by Disease/Syndrome (Week 13, 2025)

Disease	Week 12, 2025 (Previous Week)	Week 13, 2025 (This Week)	Change in No. of Cases		Week 13, 2024 (Last Year Same Week)
AGE	467	446	-21	•	467
SARI	710	712	2	•	402
Cholera	0	0	0		0
Dengue	22	37	15	•	32
Kala azar	6	8	2	•	5
Malaria	2	3	1	•	0
■ Increase in number of cases		■ Decrease in number of cases		■ No change in number of cases	

Summary Observation (including probable and suspect cases)
