

## Highlights

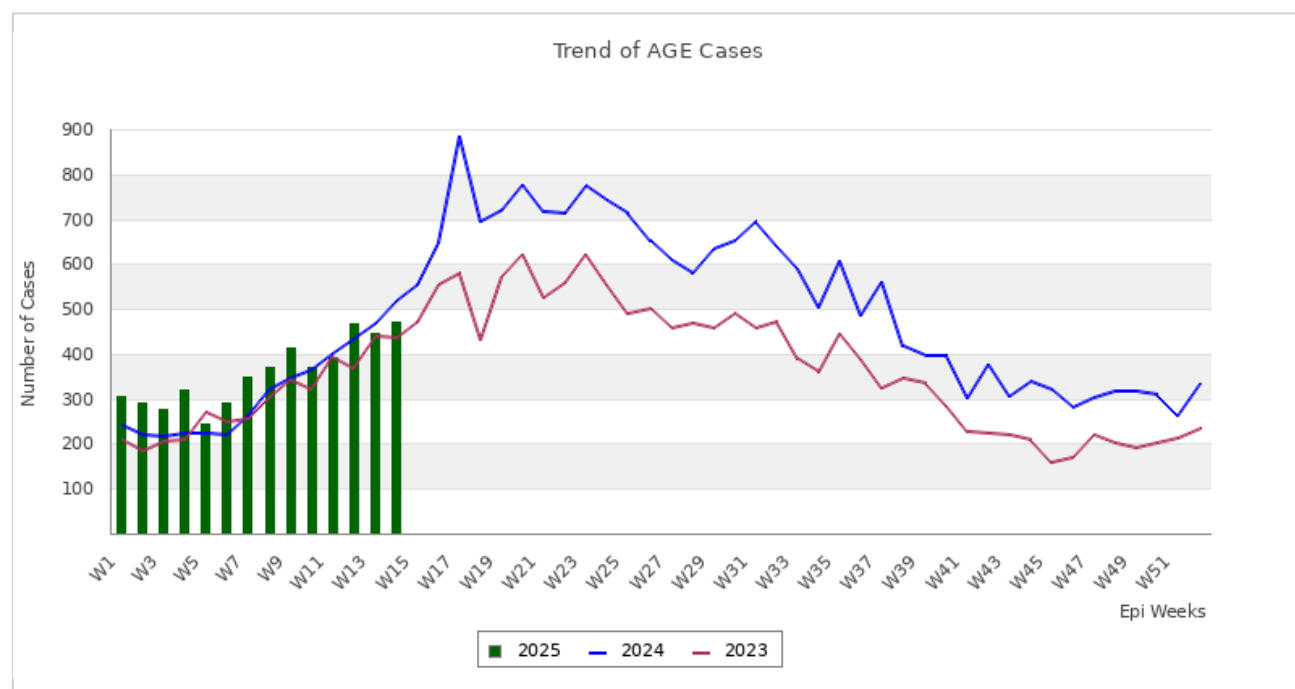

Among the reported diseases, **SARI** is the leading cause of morbidity in Week 14 with **588 reported cases**.

Overall reporting rate of Week 14 is **98.5%** with **132 out of 134** sentinel sites reporting to EWARS.

This bulletin includes data since January 2022 till date, including comparison of the same period last two year. In May 2019, 36 new sentinel sites (including public hospitals, private hospitals, and medical colleges) were added and was gradually oriented and started reporting. Recently, in November 2024, 17 reporting sites selected from all the provinces of Nepal were upgraded to sentinel sites, thus the number of sentinel sites are increasing. The current number of sentinel sites is 134.

## Trend of Outbreak Prone Diseases/Syndromes

Comparative Analysis by Disease/Syndrome (Week 14, 2025)

Disease	Week 13, 2025 (Previous Week)	Week 14, 2025 (This Week)	Change in No. of Cases	Week 14, 2024 (Last Year Same Week)
AGE	446	472	26 <span>■</span>	519
SARI	712	588	-124 <span>■</span>	442
Cholera	0	0	0 <span>■</span>	1
