

Highlights

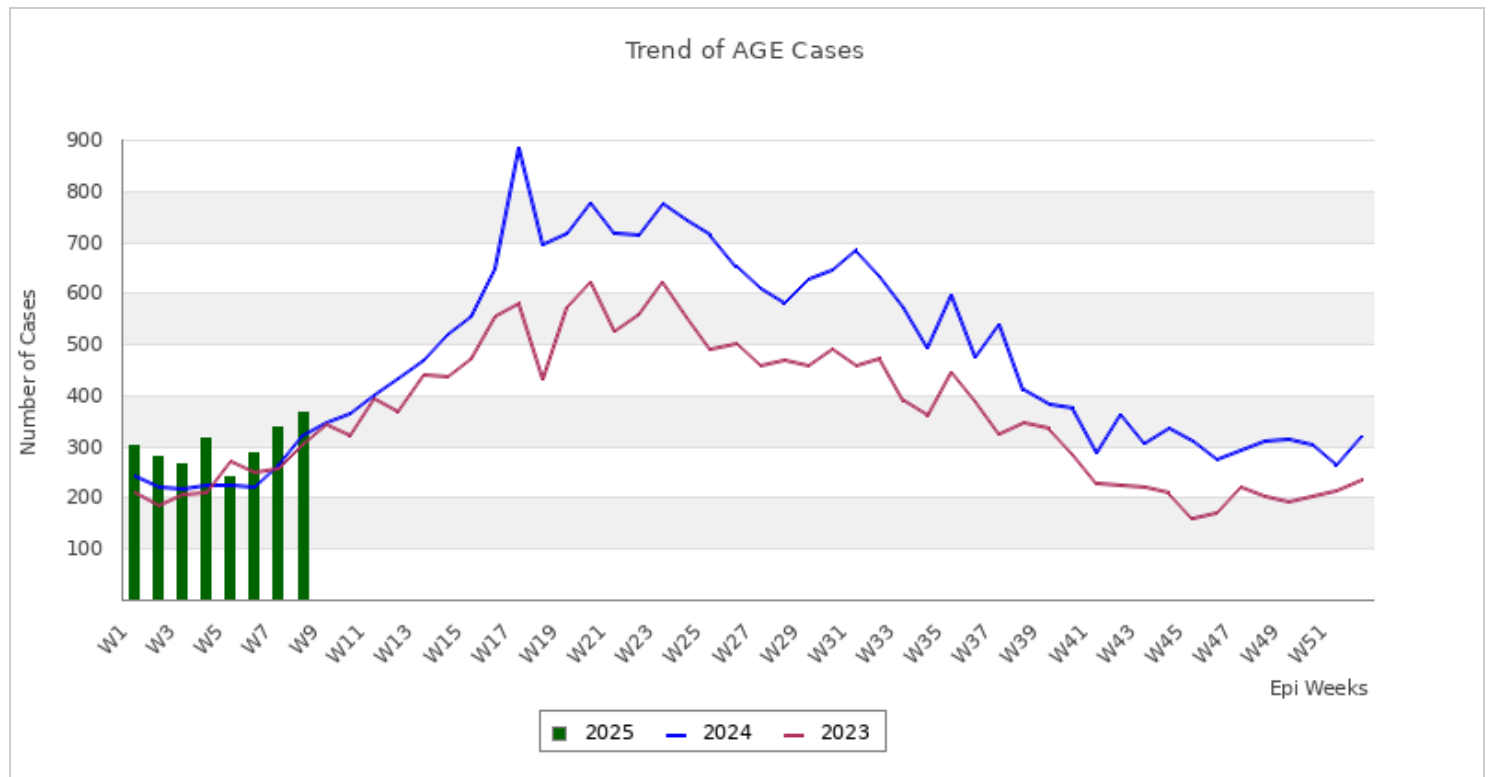

Among the reported diseases, **SARI** is the leading cause of morbidity in Week 8 with **758 (probable/suspect/confirm)** reported cases.

Overall reporting rate of Week 8 is **96.3%** with 129 out of 134 sentinel sites reporting to EWARS.

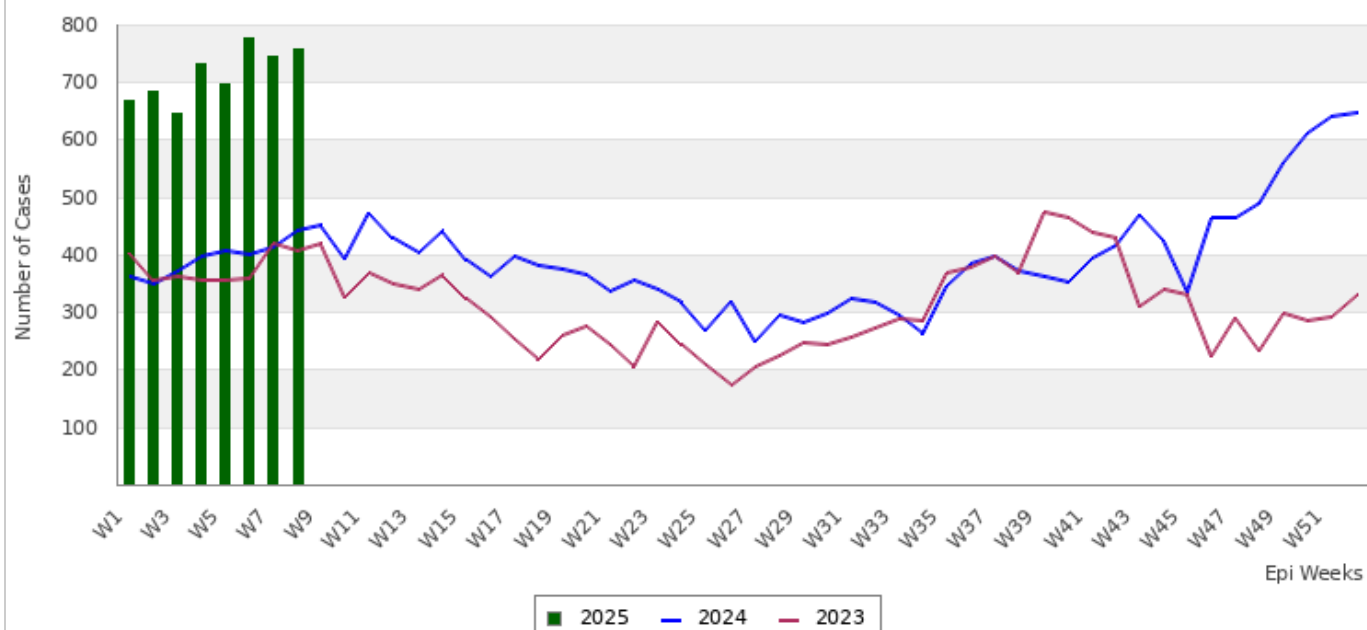

This bulletin includes data since January 2022 till date, including comparison of the same period last two year. In May 2019, 36 new sentinel sites (including public hospitals, private hospitals, and medical colleges) were added and was gradually oriented and started reporting. Recently, in November 2024, 17 reporting sites selected from all the provinces of Nepal were upgraded to sentinel sites, thus the number of sentinel sites are increasing. The current number of sentinel sites is 134.
