This bulletin includes the updates from the Early Warning and Reporting System (EWARS). It includes data since January 2019 till date, including comparison of same period during last year.

## The Early Warning and Reporting System (EWARS)

### Highlights

**AGE:** One death from AGE is reported this week from Lekhnath metropolitan, Pokhara, Kaski.

**SARI:** One death from SARI is reported this week from Tansen municipality, Palpa.

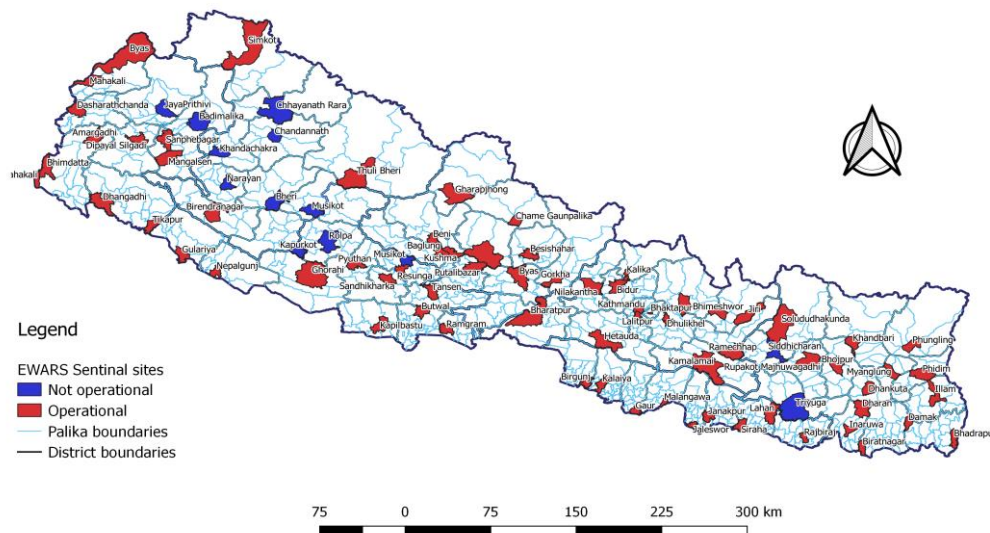

**Dengue:** Two cases of Dengue are reported this week from Dhading.

**Kala-azar:** Two cases of Kala-azar are reported this week, one each from Kalikot and Achham.

The EWARS was established in 1997 to strengthen the flow of information on vector-borne and other outbreak prone infectious diseases from the district to Epidemiology and Disease Control Division (EDCD) and Vector-Borne Disease Research and Training Center (VBDRTC), Hetauda. Rapid Response Teams (RRTs) can be mobilized at short notice to facilitate prompt outbreak response at Central, Regional and District level. RRTs can also support local level health institutions for investigation and outbreak control activities.

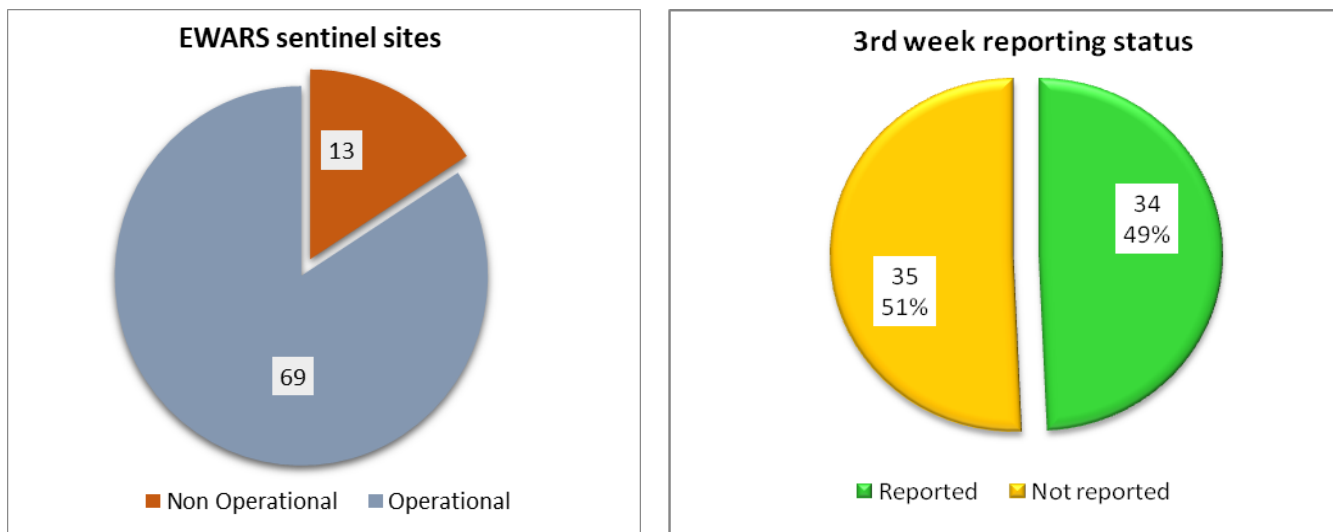

This information system is hospital-based and is currently operational in 69 hospitals (out of 82 sites) throughout Nepal (Figure 1). So far, the EWARS mainly focuses on the **weekly reporting** of number of cases and deaths (including "zero" reports) of six priority diseases/syndromes—Malaria, Kala-azar, Dengue, Acute Gastroenteritis (AGE), Cholera and Severe Acute Respiratory Infection (SARI), and other epidemic potential diseases/syndromes (like enteric fever). It equally focuses on **immediate reporting** (to be reported within 24 hours of diagnosis) of one confirmed case of Cholera, Kala-azar severe and complicated Malaria and one suspect/clinical case of Dengue as well as 5 or more cases of AGE and SARI from the same geographical locality in one-week period.

EWARS Sentinel Sites

## Reporting Status

Out of 69 functional EWARS sentinel sites, report was received from 34 sentinel sites (49%) whereas 35 sentinel sites did not report in the 3rd epidemiological week of 2019. The reporting coverage has slightly increased compared to the last week.
